PROFESSIONAL SUMMARY

B.Tech student in Computer Science who believes great technology is built by curious minds that never stop learning. I'm passionate about solving meaningful problems, creating intuitive experiences, and solving real world problems through my work.

EDUCATION

B.Tech – Computer Science | Pillai College of Engineering **CGPA: 8.9/10 through Semester 6**
Class XII (Science): 75% - K.M. Agrawal College of Arts, Commerce & Science | Class X: 84% - Guru Nanak English High School

TECHNICAL SKILLS

Programming: Python, Java, C, JavaScript,HTML,CSS
Backend / Data APIs: FastAPI, Flask, REST APIs, PySpark
Data & SQL: Postgresql, SQL , MongoDB, Firebase,Hadoop,PowerBI,Ms Excel, Tableau.
Cloud / DevOps: AWS, Docker, Git/GitHub
AI / GenAI: BERT, TensorFlow, Keras, PyTorch
Others: Unity,Flutter
Core Fundamentals: DBMS, Data Structures & Algorithms, OOP, Operating Systems, Computer Networks

PROJECTS

1.AI-Based Library Management System
Python | FastAPI | React.js | MySQL | Firebase | BERT | Gemini 2.5

- Addressed the difficulty of efficiently managing library information and helping students discover relevant books by developing a full-stack library management system with a FastAPI backend, React.js frontend, and structured database support.
- Integrated BERT and Gemini 2.5 to provide intelligent book recommendations and summaries, while using MySQL, Firebase, and REST APIs to manage and exchange application data.

2.GenAI Healthcare System
Python | Flask | SQLite | AI APIs | Speech-to-Text

- Addressed the time-consuming process of manually entering and managing patient prescription information by developing an AI-assisted healthcare application that converts spoken input into prescription content.
- Built the backend using Flask and SQLite, integrating speech-to-text, AI APIs, medical-record storage, and email delivery into a single workflow for handling patient information.

3.Crowdsourced Ocean Hazard Reporting Application
Flutter | Firebase | BitChat | Text Classification

- Addressed the challenge of quickly collecting and communicating information about ocean hazards reported by users by developing a mobile application for real-time hazard reporting and data capture.
- Used Flutter and Firebase to manage application and reporting workflows and applied text classification to interpret the semantic meaning of user-submitted hazard descriptions.

INTERNSHIP

Software / AR Development Intern | Bio-verse Project, Pillai College of Engineering **May 2025 - Jun 2025**

- Developed and tested interactive AR learning modules using Unity 3D and C#, collaborating with the team across implementation, troubleshooting, and iteration.
- Integrated 3D assets and UI/UX components created with Blender and Figma into the application workflow.

ACHIEVEMENTS & CERTIFICATIONS

- **Achievements:** Top 15% global Leet-Code ranking; Finalist, Intercollege Smart India Hackathon (SIH).
- **Certifications:** Dev-ops Course, Google DeepMind-Build Your Own Small Language Model, Deploy and Manage Generative AI Models, Transformer Models and BERT Model , Be10X AI Certification; Game Development with Python - Tech Alegria.
